600 Azaleas

755 Roses

Golf Course/Sportsfield:

523 Green   552 Fairway

558 Tee   551 Athletic Field

556 Rough

How To Take A Soil Sample

Soil Probe   Auger   Spade

¼" soil slice

Vegetable garden

Back yard

Front yard

Trees/shrubs
To take a soil sample, use a soil-sampling probe, an auger, a spade or shovel. If a shovel or a spade is used, dig a V-shaped hole to sample depth (4-6"), then cut a thin slice as shown on the above diagram.

Each sample should represent only one soil type or area—for example, a lawn, vegetable garden or perennial landscaped area. If one area of your yard seems healthy and another has bare or yellow areas, sample healthy and unhealthy areas separately even if both are lawn grasses or flower gardens, etc. For each unique area, take at least ten to twelve sub-samples. Mix these sub-samples together in a clean, plastic bucket. If the bucket has been used to hold fertilizer or other chemicals, wash it thoroughly before using it for soil samples. Take out 2 cups of the soil mixture, put into a Ziploc bag and label your ID with a water-resistant marker on each sample. Completely fill in the information required on this form and mail/ship with a sturdy bag or box. Please give your e-mail address to receive notification on sample arrival and lab report.

Please enclose proper payment or a charge account number (Visa or Master Card only).
